DevOps Engineer

SUMMARY

Proven expertise in designing and managing CI/CD workflows using Azure Pipelines, including building .NET projects and deploying artifacts efficiently. Skilled in integrating security tools such as Veracode and Privado to ensure secure development practices. Proficient in Kubernetes orchestration and containerization using Docker. Experienced with Infrastructure as Code (IaC) through Terraform and Ansible to manage scalable infrastructure. I collaborate seamlessly within agile teams to deliver reliable solutions, maintaining comprehensive documentation and driving cross-functional teamwork.

KEY SKILLS

- Cloud Infrastructure • Automation • Continuous Monitoring and Improvement • Continuous Integration/Continuous Delivery • Infrastructure as Code • Version Control • Automate Software Delivery Process • Development Cycles • Performance Optimization
- Security & Compliance • Monitoring Tool • Docker Based Containerized Microservices

TECHNICAL SKILLS

- Cloud: AWS, Azure • IaC: Terraform, Ansible • Containers & Orchestration: Docker, Kubernetes, Amazon ECS • CI/CD: Azure Pipelines
- Monitoring: Prometheus, Grafana • Automation & Scripting: Python • Version Control: Git
- Security: IAM, Network Security, Veracode, Privado • OS: Windows, Linux, macOS

PROJECTS

Centralized Diagnostics System (CDX)

Environment: Azure Pipelines, Azure Artifacts, Nexus, Veracode, Privado, Python, NuGet, .NET, Windows (x64/x86/AnyCPU/ARM)

- Designed and implemented CI/CD pipelines in **Azure Pipelines** to streamline .NET project builds on both on-prem servers and Azure-hosted agents.
- Integrated **Veracode** and **Privado** to automate security and privacy scanning in the delivery pipeline.
- Automated artifact publishing to **Azure Artifacts** and **Nexus**, including NuGet dependency handling and version management.
- Created Python scripts to automate **build versioning** based on developer needs, distinguishing between staging and release builds.
- Automated signing of **DLLs** and **PDBs** in compliance with organizational security policies.
- Supported multi-architecture builds including **win10-x64**, **x86**, **AnyCPU**, and **ARM** in both **Debug** and **Release** configurations.
- Maintained and automated **NuGet packaging** and project dependency management to ensure consistent, reliable builds.

Vision Diagnostics System

Environment: Azure Pipelines, Azure Artifacts, Nexus, NuGet, .NET, Windows (x64/x86/AnyCPU/ARM)

- Created and managed CI/CD pipelines in **Azure Pipelines** to automate .NET project builds on both on-prem servers and Azure-hosted pools.
- Deployed build artifacts to **Azure Artifacts** and **Nexus**, streamlining delivery processes.
- Automated **NuGet dependency management** and package handling directly within pipelines.
- Implemented automated signing of **DLLs** and **PDBs** in compliance with internal security policies.
- Supported multi-architecture builds including **win10-x64**, **x86**, **AnyCPU**, and **ARM**, across both **Debug** and **Release** configurations.
- Maintained consistent and automated NuGet packaging and project dependency updates.

CRM by Boldtek

Environment: Docker, Kubernetes, AWS, Terraform, Ansible, Prometheus, Grafana, MERN Stack

- Deployed a **MERN-based web application** using **Docker** and **Kubernetes** for scalable and reliable delivery.
- Managed cloud infrastructure on **AWS**, ensuring high availability and efficient resource utilization.
- Implemented **monitoring and observability** using **Prometheus** and **Grafana** to track application and infrastructure health.
- Automated infrastructure provisioning and configuration using **Terraform** and **Ansible** to support CI/CD and environment consistency.

EDUCATION

Advance Certification in DevOps Dec '22 - Aug '23

IIIT Bangalore

Diploma in Network Administration Jun '20 - May '22

Jetking Learning Dimapur Centre

Bachelor of Commerce Dec '19 - Apr '22

Nagaland University

PROFESSIONAL EXPERIENCE

DevOps Engineer	Sep '24 - Present
Hewlett-Packard (HP), Consultant via BoldTek India Pvt. Ltd.	
Guwahati, Assam	
- Automated CI/CD pipelines in Azure Pipelines for .NET builds and artifact deployments using Azure Artifacts and Nexus, reducing delivery timelines. - Integrated Veracode and Privado into pipelines to ensure application security and privacy compliance. - Reduced resource costs by 20% by architecting scalable AWS infrastructure using Terraform and Ansible (IaC) to support web applications. - Built and deployed Docker-based microservices on Kubernetes (Amazon EKS) for containerized application management. - Executed monitoring & observability solutions, boosting system reliability by 20% & pinpointing real-time bottlenecks with Prometheus & Grafana - Utilized Git for version control and collaborated with teams through Visual Studio in an Agile development environment.	
System Engineer	Dec '23 - Present
The I.S. Dept. Ltd (Client : Millennium)	
New Delhi, India	
- Develop and maintain Infrastructure as Code (IaC) using Terraform & Ansible while automating provisioning and configuration management tasks. - Enhance & support CI/CD pipelines for seamless code deployments: collaborate with development teams to optimize build & deployment processes. - Implement and manage monitoring solutions to ensure system health and performance, configure log aggregation tools for troubleshooting.	
IT Support Executive	Sep '22 - Nov '23
50Hertz Pvt. Ltd.	
New Delhi, India	
- Arranged comprehensive IT support, including installation, configuration, and updates for various systems. - Managed and secured IT infrastructure, including Linux servers, Seqrite Antivirus Server, and Sofos XGS 3100 firewall. - Assisted users with troubleshooting technical issues across hardware, software, and network domains.
